## Using Oracle

5. List the location number and name of locations that are part of the "Basketball arena". Your WHERE clause should not have a condition involving the facility number compared to a constant ("F101"). Instead, you should use a condition on the FacName column for the value of "Basketball arena".

select locno, locname

       from location, facility

       where facname = 'Basketball arena'

           and location.facno=facility.facno;
