**Problem 3:** Augment your ERD from problem 2 with the *Specimen* entity type. For each specimen collected, the database should record a unique *SpecNo*, *SpecArea* (vaginal, cervical, or endocervical), and *SpecCollMethod* (thin prep or sure path). You should also add a 1-M relationship from *LabVisit* to *Specimen*. A lab visit must produce at least one specimen. A specimen is associated with exactly one lab visit.

Problem 3: ERD Drawing
